

# 2<sup>ND</sup> GRADE

## How Plants Grow

Hi 2nd graders! Since we started our Living Science section, we said we would be focusing on insects and plants. We learned all about the cool Darkling Beetle and the beautiful Painted Lady Butterfly. Now, we are going to shift to learning all about plants.

### **Video**

Watch the fun video *'How Plants Grow'* to get a better understanding of how seeds grow into a plant and what causes the seeds to grow.

Why don't they just grow on their own? You will watch the kids perform an interesting experiment - they change the conditions of what different seeds receive and see how the plants will grow differently.

Also, the video will look at the 4 main parts of a plant and what each part of that plant does.

Following along with the video, you can complete the attached worksheet called *Video Review*.

If you REALLY want to see this happen, try the video's experiment at home with seeds of your choice!

Enjoy!
