

3RD GRADE

MAGIC WATER

Hi 3rd Graders! Earlier in the year, we spent a lot of time learning about water and its properties. Remember when we examined water droplets; how they cling together, how they move around on a slope and how different temperatures of water (the red and blue dyed water) would sink or float? Here's a fun experiment you can do at home with only a couple of items you probably already have. Check out the video below and try it with your family!

<https://www.facebook.com/stevespangler/videos/3955510401133545/?v=3955510401133545>

Materials: glass or plastic bottle, rubber band, toothpicks, mesh screen or netting material (could find in the grocery store produce section) and water

Make sure to perform this experiment outside or somewhere you won't make too big of a water mess!
